How to use this guide

This guide is designed to provide you with a one-stop point of reference for contemporary career resources and information to your next big step; beyond the school gates!

The guide should be used in its electronic format so that links to resources and websites remain ‘live’.

Content has been divided into sections, as follows:

- *Career and further study exploration* – find resources to help you consider employment and further study options.
- *Subsidised training and incentives* – search for subsidised training and financial assistance.
- *Industry specific career exploration* – learn about the variety of opportunities across major Queensland job sectors.
- *Preparing to be job ready* – find practical tips and information about what it means to be ‘job ready’ from an employer’s viewpoint.
- *Assistance with finding a job* – explore useful sites to help you search for and secure employment.
- *Support for young people: mental health and disability support* – access links to a range of services and programs designed to assist you with mental illness or disability.
- *Support for year 13 Indigenous Youth* – find out about the Youth Employment Program for Aboriginal and Torres Strait Islander peoples.
- *Support for young people with cancer* – read practical, real examples of overcoming the challenges faced by young people to engage with school, study and work, during and after cancer treatment.

Support for young people living out of home – check out a range of apps and resources, including financial budgeting tools to successfully transition to independence. See the back of this guide for a glossary of technology terms.

Interactive feature! Look for the following symbols on the Industry specific career exploration pages to learn more about how the industry engages technology and current jobs that are in demand.

Introduction

The 2024 school leavers’ guide to jobs and training has been developed by the Department of Youth Justice, Employment, Small Business and Training (DYJESBT) to provide information and resources to school leavers, senior students and those who provide career advice.

Opportunities are rich and varied for today’s job seekers! There are skills shortages across all industries and regions, with many and varied job opportunities available. Use the job search tools throughout and at the back of this guide to start searching for your first or next job.

The guide features industry-focused information about careers and technology adoption. While most industries were already moving toward a more technologically advanced and digital world, the COVID pandemic accelerated change across every industry; including the way industries go about their business and the skills required to work within them.

Great opportunities exist to support industries to work in new ways, with the future looking bright for digital skills and technology-based roles in particular. For those industries that have adapted and those that continue to evolve, there are many exciting changes to be part of!

Consider what industries appeal to you, read about the roles and opportunities that may be on offer, refer to the resources included for tips and advice on applying for jobs or courses to support your first, or next career move. Look for the icon on industry pages to click for more information.

Vocational education and training (VET) can provide you with strong pathways to your dream job or career, give you skills employers value and may also be an excellent pathway into higher education, including university. This guide contains resources to assist you in considering how VET can help you put your best foot forward and reach your career goals.

Congratulations to the graduating cohort of 2023. Well done for making it through and our best wishes for your future career choices.

Thank you to our industry stakeholders and partners for their input and contributions to this guide.

Industry specific career exploration

Agriculture, horticulture and aquaculture

Queensland boasts the largest portion of agricultural land of any state in Australia, has a global reputation of safe and nutritious produce, and is famous for producing bananas, pineapples, macadamias and mangoes.

Queensland's climate allows for incredible diversity and includes the production and export of sugar (cane), cotton, grains, meat, fish, poultry, vegetables, nuts, fruits, flowers, seafood (prawn, redclaw and fresh water fish), dairy and timber—providing materials to make the homes we live in, the clothes we wear and the food we eat.

The growth of regional and agriculture innovation and its uptake of technology is having an impact on roles in agriculture, with higher demand for technology specialists. Agtech in agriculture is also a growing sector. Roles across the industry can be diverse and challenging; jobs can be set on both the land where the primary production occurs, and regional and city-based roles.

Examples include farm hands and managers (including aquaculture farms), animal husbandry (feeding, water sampling, monitoring stock growth rates, collecting animal data), stockmen and women, trades and maintenance (mechanics, sprayers, checking and maintaining equipment, operating pumps), agronomist and advisors, farm supervisors, engineers, veterinarians, lab technicians, IT professionals, HR professionals, aquaculture technicians and compliance officers, wildlife and environmental officers (monitoring water and the environment), laboratory assistants, machine operators and rural financial officers (counsellors, land valuers), and includes roles in education, finance, trade and export, and the sciences.

Business and e-commerce skills, digital literacy, workforce management skills (dealing with conflict, adaptability) as well as work health and safety (biosecurity, hygiene standards and managing risk) are all skills needed in this industry.

COVID-19 is still having an effect across the value chain and it has highlighted the importance of agriculture to ensure food supply. It has also had an effect on the workforce, with shortages experienced across the value chain.

Looking to start a career in a meaningful and exciting industry? If you're aged 18–25, an AgCAREERSTART gap year will help you gain skills and knowledge to grow the farms of the future:

Automotive

The automotive industry is a highly technical and dynamic sector covering a variety of activities through the cradle-to-grave lifecycle of all types of vehicles. Once considered an industry purely for grease monkeys and rev heads, a new wave of automotive professionals is beginning to emerge as a result of technological advancements. Where automotive employees were traditionally driven by a passion for cars, this new wave of aspiring professionals are drawn in primarily by a love for information, technology and engineering.

Modern vehicles, large and small, are becoming increasingly advanced in terms of the computers and technology inside them. As such, a greater focus is now being placed on understanding and using diagnostic and analytic tools to identify faults and perform repairs, skills more traditionally aligned with engineering and IT than the automotive trades.

Currently employing over 100,000 people in Queensland and with more than 100 different career paths, the automotive industry has employment opportunities for everyone, regardless of age or gender.

People in the industry have the opportunity to work in specialised fields, such as heavy vehicles (trucks, buses, agricultural machinery and emergency vehicles) and light vehicles (luxury, performance and prestige model cars).

The industry also includes the repair and service of electric vehicles, bicycles, outdoor power equipment, marine vessels, motorcycles and some manufacturing.

CURRENT JOBS IN DEMAND

Banking and finance

A career in the banking and finance sector often offers an exciting and fast-paced environment due to the weight of the financial decisions being made and the advice being provided. The banking and finance sector is wide-reaching and can assist a large range of businesses and individuals (including yourself!). Major segments within the banking and finance sector include banking (mortgage services, saving and loan establishments), investment services (portfolio management), insurance services, tax and accounting services (audit, business regulation), insurance and credit unions.

A career in the banking and financial services industry could see you working anywhere from a giant blue chip business to a local insurance business, your own accounting company or perhaps in a government backed regulatory body. You might be involved in investing, borrowing, insuring or managing funds. And as other industries like resources, healthcare and education grow, so too does their need for a diverse range of finance related roles across sectors. From agribusiness bankers on-the-road meeting clients to bank tellers serving and managing customers at a retail bank to stock brokers managing money on behalf of others.

Key roles within the industry include accountant, bank teller, loan officer, client services officer, financial planner, commercial/data/financial analyst, risk and compliance manager, portfolio manager, investment banker, stock broker and chief financial officer.

Jobs in the industry may be advertised through job search sites. For information about relevant qualification, check the websites below (type banking or financial into the search bars).

EMERGING TECHNOLOGIES

CURRENT JOBS IN DEMAND

Community services

The community services industry (also known as social assistance) is one of the largest employing and fastest growing sectors in Queensland.

Throughout a person's life, they will engage at least once with a community service.

The industry covers everything between early childhood to aged care. The variety of roles is immense, with hands-on roles to essential behind-the-scenes jobs, such as cleaning/sterilising, food and nutrition, office administration, grounds and maintenance, and security.

Community services form the foundation for overall wellbeing and includes housing and homelessness, education, employment and disability support, mental health, youth work, child safety and early childhood education and care.

Jobs may be available in all metropolitan and rural areas, in private services or clinics and centres, aged and residential care facilities, community-based organisations and in-home care.

Skills needed include community development, social inclusion and support, dementia training, mental health and palliative care, and COVID-19 and safe hygiene practices.

CURRENT JOBS
IN DEMAND

Construction

The construction industry builds the places we live, work and play, and includes activities across mining, quarrying, forestry, building and manufacturing. Typically, careers in the construction industry are guided by well-defined training and development pathways—providing entry level qualifications and approximately 70 different careers.

Apprenticeships and traineeships are in high demand and are available across a range of trades, including concreting, carpentry and joinery, plumbing, electrical and tiling. Roles in this industry include labourers, tradespeople, foremen, surveyors, estimators, project and construction managers, landscapers, tower crane operators, safety inspectors and engineers. Entry level roles include trade assistants and general labour-related roles in areas such as carpentry, landscaping, painting, flooring and tiling, masonry and roofing.

Jobs can be found across a variety of settings, including residential, commercial, industrial, environmental and civil construction.

While COVID-19 impacted most industries, projects in the construction industry continued. This included work on the Warrego and Bruce Highways, upgrades to the M1 and development of Queens Wharf, Cross River Rail and Gatton Prison. Construction of the largest onshore renewable energy facility (MacIntyre Wind Farm) commenced in 2022 and is expected to be operational from 2024.

CURRENT JOBS
IN DEMAND

Digital technologies

The technology sector is comprised of businesses that sell goods and services in electronics, software, computers, telecommunications and other industries related to information technology (IT). Technology companies invest heavily in research and development, and may undertake riskier projects with greater future potential. Tech companies also run social media platforms like Facebook, Twitter and Instagram.

Opportunities range from entry level roles, such as help desk support or IT technician, to senior roles in management such as chief information officer and specialist positions.

Companies rely on the technology sector to help them grow and thrive. Digital technology roles can take you almost anywhere, from small or medium enterprises to large corporate organisations. The terms 'global' and 'remote workforce' could mean working for an international company without even leaving your home office.

As a tech professional, you could solve cybercrime, design robots, create inspirational multimedia and save lives using artificial intelligence.

Specialised fields include content and design (using artistic skills to design engaging digital content for apps, games, websites, advertising and movies), cyber security, robotics and autonomous technologies, artificial intelligence, blockchain, extended reality, 5G technologies and industry 4.0.

Product development includes creating software and hardware, phones, computers, robots, drones, Internet of Things solutions, automated technologies, and operating systems and apps to run on these devices.

Professional skills needed include those that cannot be automated – critical thinking, analytical skills (e.g. interpreting data and digital forensics), communication, social engagement and intelligence. Top software programming skills in demand include Python, SQL and JavaScript.

CURRENT JOBS
IN DEMAND

Electrotechnology and utilities

Energy

To attain renewable energy targets industries are integrating more renewable technology systems, including using batteries and pumped-hydro to store energy, wind generation, solar heating and cooling, and limiting hydrofluorocarbons to reduce carbon emissions.

Electrotechnology and electricity supply workers are in demand across different industries and skills in this field could provide opportunities in maintenance, design, construction projects, renewables, communication, refrigeration and air-conditioning.

Work can be undertaken in both commercial and residential settings.

All electrical trades, particularly electrical apprentices, are commonly sought after by employers in the industry.

Shifting to renewable energy is going to create all sorts of jobs that will offer exciting opportunities to help address the impact of climate change and promote more equitable access to renewable energy.

The [Future Energy Jobs Guide](#) has been designed to assist school leavers and existing skilled workers to explore career opportunities in the clean energy sector and identify the education and training pathways to get there.

CURRENT JOBS
IN DEMAND

Water

The water industry delivers the essential services of supplying safe and sustainable drinking water to our communities, and ensuring that wastewater is treated and appropriately reused or discharged safely back into the environment where that is not feasible.

Workers play a key role in protecting the health and safety of their communities and the environment, and there are more than 6000 people in Queensland working directly in the water industry, plus many more in support industries like construction. Water and sewerage services are mostly delivered by public service providers, with the majority being local government.

There are a variety of jobs in demand, including water and wastewater treatment plant operators, construction and maintenance workers, engineers, scientists, environmental officers, electricians, plumbers and mechanical tradespeople.

The industry uses innovative systems and advanced technology to maximise and protect public health and precious natural resources, with job opportunities in capital cities and regional and remote communities. Responsibilities include the treatment and supply of drinking water, collection and treatment of wastewater, management of dams and catchments, and monitoring of the environment. There are long term careers across the state for people with a passion for essential community services and attractive lifestyle opportunities.

You can learn more about careers in the water industry and hear what workers like about their jobs here:

CURRENT JOBS
IN DEMAND

Film, television and new media

The screen and media industry provides opportunities for stories to be told through mediums such as film, television, games and XR (extended reality), radio, print journalism and online or digital content delivery. With digital platforms being developed constantly, content is increasingly adaptable and accessible. Content and stories shared across channels can shape communities and has the ability to educate, influence and entertain, providing an escape from the realities of our lives.

Screen and media is rich with career possibilities and the roles are equally diverse, depending on which sector you gravitate toward. Choose from producer, director, art director, screenwriter, director of photography, sound recordist, editor, animator, make-up artist, costume designer, colourist, distribution manager, location manager as well as some lesser known roles such as grip, gaffer, drone operator and stunt person within film and television.

Roles in games and XR can include content, user experience, interface and narrative designers, developers, programmers, 3D artists, animators, CAD designers, motion capture artists, producers, sound designers, post-production and motion graphic artists, and hardware specialists.

Roles in radio broadcasting can include program director, journalist, announcer, news and sport editors, sound engineer, reporter and producer.

A career in this industry can be based in any number of places. With television and radio typically being hosted within specialised studios, reporters can be 'on location' or 'in the field' depending on where the current action is, and film locations could take you to any corner of the globe!

Queensland has established itself as a filmmaking hub for both domestic and international productions, providing a wide range of opportunities for future careers based right here in Queensland.

With a strong commitment from the government to grow local content creation and attract overseas production to Australia, job prospects and possibilities will continue to grow!

Fitness, sport, recreation and racing

Fitness, sport and recreation

The fitness, sport and recreation industry offers a variety of jobs, settings and locations of work.

The industry is expected to grow as Australians are embracing the physical and mental health benefits of being physically active as well as increased opportunities of the Brisbane 2032 Olympic and Paralympic Games. This is set to see demand for fitness, sport and recreation services.

Services can be offered through fitness centres, including gyms, sport and recreation organisations and venues, voluntary organisations, community recreation centres and leisure centres (both government and commercial), community-focused organisations and sole traders.

Jobs are categorised across aquatic and community recreation, fitness, outdoor recreation and sport. The variety on offer is immense and includes gym instructors, personal trainers, aquatic fitness instructors, sport and recreation service managers, sport development officers, sport coaches and officials, gymnastics coaches, swim teachers and instructors, pool lifeguards, and outdoor adventure guides and leaders. The industry is also experiencing a shortage of workers as a result of the COVID-19 pandemic.

In addition to technical and job specific capabilities, skills needed in this industry include teamwork, communication, administration, management and leadership.

CURRENT JOBS IN DEMAND

Health

The healthcare industry is the largest employing and fastest growing industry in Queensland.

It includes a large variety of sectors with the primary goal to support individual and community wellbeing through a range of care, support, education, welfare and related services. The industry exists in every community throughout Queensland, providing services across the population, often focusing on meeting the needs of sick, frail, vulnerable and at-risk members of the community.

Roles can be patient centred and work directly with clients, supporting and working under the direction and delegation of health professionals to assist the everyday care needs of patients and ensure continuity of care. In addition, support roles ensure efficient delivery of health services and include administration, finance, human resources, information technology, logistics, practice management, policy development, cleaning, sterilisation, pathology and laboratory services, food and services, grounds keeping, maintenance, trades and security.

The core skills needed for all roles include interpersonal skills, such as emotional intelligence, critical thinking, teamwork and communication, resilience, stress tolerance and flexibility. Depending on the type of role you are interested in, numeracy, language and literacy

skills will also be necessary core skills. Some fields of employment will require science and technology skills.

Queensland Health advertises vacant positions through the Smart Jobs website.

EMERGING TECHNOLOGIES

CURRENT JOBS IN DEMAND

Manufacturing and engineering

Manufacturing is a diverse industry creating and producing everything we need to build homes to live in, vehicles to drive, sail or fly, production of medications, what we wear and eat.

The diversity of manufacturing is broad and includes food processing, defence manufacturing, aviation, aeronautics, meat processing, printing and graphic arts, textiles, brewing and distilling, clothing and footwear and furnishings, to name a few.

Local manufacturing opportunities are increasing—including the textiles and clothing sector which has experienced growth with domestic supply of personal protective equipment (such as face masks) and other medical-related products. On-shoring of services has increased due to the impact of international transportation delays. Further opportunities include local production of hand sanitiser, hygiene and cleaning products, health supplements, pharmaceuticals and toiletries.

Greater opportunities may be offered in the renewable energy sector, mining, engineering, food production, meat processing, metal, machinery, chemical, building materials, wood, furniture and other manufacturing sectors thinking about increasing production here in Australia as a result of ongoing disruptions with international supply.

Australian and Queensland Government commitments to cut greenhouse gas emissions will provide enormous opportunities for careers in renewable energy supply. Whether directly manufacturing resources such as hydrogen or products which are used in the supply chain such as wind turbines, solar panels, and electrolyzers, there will be thousands of jobs created.

Most manufacturing occupations are in a skills shortage, which means there are fantastic career opportunities available now and into the future.

Jobs in manufacturing and engineering can include textiles designers, graphic artists, computer aided designers, lab technologists, and computer aided manufacturing programmers.

Advanced manufacturing

The Fourth Industrial Revolution (Industry 4.0) is innovative, creative, cutting edge and moving at a rapid pace! Welcome to advanced manufacturing—artificial intelligence, 3D (additive) printing, drones and laser technology.

This industry includes the design and manufacturing of medical devices, autonomous vehicles, robotics and technologies across diverse settings, including aerospace, computer gaming, agriculture and farming, food, transport, and defence and biomedical services.

Property services, real estate and security

Property services are wide-ranging and assist with building a large range of practical skills. They cover a wide range of essential services that ensure safe and hygienic living, creating (and operating within) work and recreational environments, and providing private and commercial real estate roles (such as leasing and sales).

Specific areas of expertise within the property services industry include rural and city surveying (measuring, recording, mapping), real estate and property sales and analysis (including technical advisors/consultants, data analysts, agents, auctioneers), waste management (biohazard, chemical and medical waste, recycling, bin collection), pest control, security services, on-site maintenance (e.g. swimming pool maintenance) and cleaning, and are applied across residential, industrial, government and commercial settings.

Jobs such as building design, security, cleaning and property management may be offered across a broad range of environments that exist within these commercial settings (e.g. retail, hospital and health services, food services, mining, tourism and transport) across both urban and suburban locations.

Like any industry, demand within the property services, real estate and security sectors is influenced by a number of factors, such as environmental (flood, fire etc.), market influences (e.g. interest rates). Jobs currently in demand include security guards, planners, real estate agents and domestic, commercial and industrial cleaners. Opportunities in cleaning may be self-employed or on a contract basis.

Jobs in real estate and cleaning opportunities are typically advertised directly through employers on job search sites.

Public sector and government

Australian Defence Force

The Australian Defence Force (ADF) is comprised of the navy, army and air force. The role of the ADF is not only to protect the land, sea, air and people of Australia in times of unrest, but also to provide assistance here and internationally in events of natural disaster and to provide humanitarian and peacekeeping support.

The ADF offers jobs across a broad variety of fields, including trades, professions, and combat, support and technical roles.

In response to COVID-19, the ADF also had designated resources supporting the repatriation of Australians from overseas, planning and contact tracing teams—providing medical assistance in some regions, supporting mandatory quarantine arrangements, and supporting state and territory police border controls. Defence also contributed to the production of surgical face masks and ventilators.

For Australian Defence Force opportunities and careers see: adfcareers.gov.au

Work at the leading edge of technical innovation in the forces, making the most of your interests in science, technology, engineering and maths:

CURRENT JOBS
IN DEMAND

Police

The Queensland Police Service (QPS) is searching for applicants who seek purpose, direction and meaning from their careers. If you are interested in a job where no two days are ever the same, that is rewarding and challenging with plenty of career options, policing may be the job for you.

Working with the QPS promises to be an exciting, rewarding and challenging career, with a variety of specialist areas in the service, from general duties to child protection, dog squad, POLAIR, fraud and cyber crime, forensic crash unit and more. As a member of the QPS, you will stand alongside 11,000 police officers across the state who protect and serve the community.

QPS follows a rigorous recruitment process to select applicants with the right skills, aptitude and attitude. Prospective applicants can start the application process from 17 years of age and, if successful, start at the academy when they are 18 or older.

If you are graduating from high school and considering a career with the QPS, you are encouraged to develop your skills and knowledge to help you prepare for the selection process, your training as a recruit, and your 'on the road' experience as a general duties police officer.

Got what it takes to become a police officer? Take the eligibility quiz to find out:

policerecruit.com.au

Police staff, protective service officer and police liaison officer vacancies are published on the Smart Jobs website:

directory.gov.au/departments-and-agencies

Resources and mining

Queensland's minerals and energy exports include coal for energy and steel making, gold, silver, lead, zinc, bauxite and rare earth elements for the manufacture of electronic equipment including electric vehicles, as well as many other day-to-day commodities. The resources sector has an expanding renewable industry that encompasses solar, biomass, hydro and wind energy. It offers a huge variety of careers, from trades, project management, and quality and compliance to engineering, environmental professionals, transport and logistics, geology, IT, cyber security, health and safety, cooks, accountants, lawyers and human resources.

Jobs can be found from the beach to the bush, and technology means that numerous roles previously based on-site may now be done from a city-based remote operations centre. The Queensland resources sector is part of a global industry, so who knows where you might end up.

Retail and personal services

The Queensland retail sector is vibrant and varied! Retail is the second largest employing industry in the state. There are jobs in every region and it's one of the largest employers of young people.

There is a retail speciality suited to everyone's interests, including supermarkets, department stores, pharmacies, homewares, fruit and vegetables, fast food and take away, entertainment, fashion, cars, jewellery, newsagencies, stationery, machinery and equipment, hardware, and pets and pet goods.

Retail is strongly connected to the personal services industry which includes floristry, hairdressing, barbering, laser hair removal, nail technicians, make-up, cosmetics and beauty.

There are strong links to manufacturing, transport, tourism and hospitality industries.

With all components of the supply chain having crucial roles to play in the retail industry, opportunities exist in warehousing and distribution, customer service, import/export, management, information technology, human resources, legal, merchandising, marketing and advertising.

Jobs can be based in major shopping centres and with big retailers, chain stores and franchises through to boutique outlets. Centres are continuing to expand and there's an increase in online shopping—both of these create different opportunities across the state, with both local and international markets.

For information about starting your career in the retail sector, visit:

nra.net.au/resource-categories/training

Alternatively, make enquiries with a retailer you would like to work for. Jobs in this industry are often directly advertised through the retailer and a high percentage of retail jobs are obtained by visiting the store in person.

EMERGING TECHNOLOGIES

CURRENT JOBS IN DEMAND

Tourism, hospitality, accommodation and events

Queensland's tourism industry is a major contributor to the state's economy, valued at \$22 billion and providing 206,000 jobs. It generates a Gross State Product (GSP) of \$21.5 billion and Gross Value Added (GVA) of \$19.0 billion. Tourism supports 134,400 direct jobs and 71,700 indirect jobs, employing more people than agriculture, forestry, fishing, or mining.

The industry is expected to grow further, with the accommodation and food services sector projected to have the fastest employment growth by 2024–25, especially in regions like Cairns and the Gold Coast.

The Queensland tourism and hospitality industry has so much to offer. Imagine working on an island as chef or being a tour guide in a rainforest or on the Barrier Reef. There are many careers to choose across Queensland including front-of-house customer facing roles (waiters, tour guides and travel consultants, front desk, porters). Back-of-house supporting roles that are critical to ensuring quality customer experiences include: (chefs, cooks, kitchen assistants, cellar hand, accountants, social media officers, marketing officers, human resource officers, IT staff, housekeepers, maintenance and landscapers).

Importance of chefs and cooks to the industry

A chef is a trained professional cook and tradesman who is proficient in all aspects of food preparation, often focusing on a particular cuisine. The word 'chef' is derived from the term chef de cuisine, the director or head of a kitchen. Chefs can receive formal training from an institution, as well as by apprenticing with an experienced chef.

Restaurants, cafes, and hotels are where visitors often create memorable experiences. Queensland's culinary scene is infused with creative twists, fresh produce and wine regions for visitors to discover. Chefs and cooks are vital to ensuring that Queensland retains its reputation of providing quality food experiences for visitors and the community.

To learn more about the tourism and hospitality industry, and for more information about careers, visit the Queensland Tourism and Hospitality Careers Guide:

[OTIC Careers Guide | Queensland Tourism Industry Council](#)

Explore hospitality

Importance of hospitality staff to the industry

Similar to cooks and chefs, front and back of house hospitality staff are essential in providing a memorable experience for residents and visitors. These jobs include restaurant and hotel managers, waiters, bartenders, baristas, and kitchenhands within hospitality and event occupations. Hospitality staff get to enjoy a fun, flexible and active workplace where they can interact with many different people to ensure they have a great time whilst earning an income.

Importance of digital and tech jobs to the industry

The latest user-friendly technology has become so entrenched in society that it is now an expectation of consumers. This also applies to the tourism and hospitality industry, where there is a need to incorporate the latest technologies to ensure user-friendly, and seamless customer experiences. Digital technology in tourism, travel, and hospitality includes online bookings, digital confirmations, digital marketing, and digital hotel or airport check-in, ridesharing, and online ordering, and virtual reality can be used to enhance a tourism experience. Technology is continuously changing, and tech skills are vital to the industry.

EMERGING TECHNOLOGIES

CURRENT JOBS IN DEMAND

Transport and logistics

Transport is the method of moving goods and people by road, rail, sea and air. Logistics involves all the systems that manage the procurement, storage and distribution of goods from their point of origin to their final destination.

Transport and logistics services are essential to industry, community and the economy.

Transport and logistics offers a wide range of opportunities for a diverse workforce and career pathways with entry points directly from school through vocational education, training courses, university pathways or direct employment. Jobs across the industry include warehouse storeperson, transport and despatch clerk, transport scheduler, freight forwarder, purchasing and logistics clerk, aviation ground operations, forklift operator, drone operator, deckhand, professional driver (all vehicle types), coach captain or tour guide, workplace health and safety officer, mechanic/maintenance technician, customer service officer and so much more.

Professional roles include supply chain/transport/logistics/operations/project manager, contract administrator, business/data analyst, transport professional, accountant, marketing manager, human resources, cyber security specialist and procurement specialist.

The importance of the Transport and Logistics industries has been highlighted in recent times and the increasing demand on the supply chain has seen a surge in the volume of people required to fill roles in the various sectors.

The industry is continuously adopting new technologies, which creates opportunities to work with sophisticated systems and automation.

Some of the roles on offer include after-sales technology support, operation and maintenance of vehicles using new technologies (electric battery and hydrogen powered), robotics engineers, operators and programmers for automated systems, fleet managers, cyber data analysts and drivers to operate modern heavy vehicles which incorporate a range of smart technologies.

People management, team work, customer service, digital literacy, data analytics and communication are highly sought-after skills.

Glossary

Below is a glossary of technology terms you may find in this guide.

Digital technologies

Industry 4.0 digital technologies represent new ways technology becomes embedded within society.

The Internet of Things (IoT)

Also known as the Industrial Internet, the Internet of Things is the connection between physical devices, such as vehicles and appliances, and the communication between them.

Big data and analytics

Big data and analytics is the examination of large and varied data sets to uncover patterns, correlations, trends, preferences and other useful information that can help organisations with business decisions.

Software and system integration

Integrating all physical and virtual components of an organisation's system helps to create something that acts like a single system.

Cyber security

Cyber security is the protection of internet-connected systems from cyber attacks.

Cloud computing

The cloud refers to a network of remote servers hosted on the internet, compared with a local server or a personal computer. It's used to store, manage and process data.

Additive manufacturing (3D printing)

3D printing joins or solidifies material under computer control to create a three-dimensional (3D) object, usually by successively adding material layer by layer.

Autonomous robotics and assistive technologies

Robot and other assistive technologies that performs behaviours or tasks with a high degree of autonomy.

Augmented reality

Augmented reality is the technology that superimposes a computer-generated image on a user's view of the real world to provide a composite view.

Virtual reality

The computer-generated simulation of a three-dimensional image or environment that can be interacted with in a seemingly real or physical way by a person using special electronic equipment, such as a helmet with a screen inside or gloves fitted with sensors.

Simulation

Computer-led imitation of a situation or process.
